## Teaming up for turnkey rental solutions

Two Goscor divisions, Bobcat Equipment Rental and Goscor Access Rental, recently joined forces to provide an end-to-end lifting equipment solution to meet essential materials handling duties during the construction of a wind farm in the Western Cape region, South Africa.

"By joining forces with Bobcat, we could provide the customer with a complete rental solution, comprising telescopic

handlers and work-at-height machines, qualified operators and back-up service," says Brent Viljoen, branch manager of Goscor Access Rental in the Western Cape.

Rental equipment requirements specified that work-to-height machines had to lift workers to a maximum height of 26m, while the telescopic handlers had to be a minimum of four tons. All the equipment had to be diesel

driven and able to work on uneven, rough terrain. Bobcat delivered three telescopic handlers as part of the first laydown and Goscor Access Rental honoured the second part, by supplying three Genie boom lifts.

The rental solution included qualified Goscor operators. Parts availability and 24/7 technical standby service complemented the end-to-end offering.

Concor Opencast Mining

## Strategic partnership to offer mining services across board

Concor Opencast Mining, Murray & Roberts' contract mining division, has partnered Australian contract mining giant Downer Mining to offer a full range of mining services for small to large projects.

While Concor Opencast Mining positions itself as a mid-tier mining contractor, its partnership with Downer

Mining will offer it the capability to tackle Tier 1 projects. "Our combined effort will ensure that any joint operation has sufficient resourcing, infrastructure and systems to enable the delivery of a Tier 1 project," says Gert Buitendach, contracts director at Concor Opencast Mining. Downer Mining has extensive

experience in running ultra-class mining equipment, such as 800t class excavators and 300t class dump trucks. "In principle, what this agreement means is that, when projects that are of mutual interest come up that are suitable for both of our objectives, we will partner with Downer Mining," says Buitendach.
