

## Improved lift loaders launched

The recent unveiling of the Bobcat 5-Series (S550 M-Series radial lift loader and S530 M-Series vertical lift loader) demonstrates that the company understands its customer needs.

The new loaders feature a completely re-engineered cab that keeps operators comfortable, and combined with superior power and hydraulic performance, helps them to do more, faster and more efficiently.

With a 36.4 kW engine and 869 kg rated operating capacity, the S530 model features a vertical lift path boom arm particularly suited to lift and carry, as well as material handling applications.

It offers an increased lift height compared to the previous generation of machines. The optimized lift arm design of the S530 provides operators with the ability to lift heavier loads higher. This makes it easier to clear high-sided truck boxes and hoppers as well as placing pallets loaded with heavy materials.

The more powerful S550 radial lift loader has a 45.5 kW turbo engine and 894 kg rated operating capacity. Standard features of both models include bucket and bolt-on cutting edge; bucket levelling valve; cushioned lift cylinders; reverse alarm and strobe light; engine shutdown and monitor system; and fuel water trap.

In addition to these benefits, the new M-Series is offered with a three-year/4,000 hours extended warranty, spare wheel, grease gun and lug wrench.

“We do not believe in a one-size-fits-all approach and for this reason, we continue seeking new ways to improve our current range of loaders to ensure that we are relevant and meet the needs of our customers,” says Jan Stansfield of Bobcat Equipment SA.

As part of the Goscor Group of Companies, Bobcat Equipment SA focuses on the sale, rental and aftermarket support of the Bobcat range of compact equipment.
