

## ONEIC purchases first mini-excavators in Oman

The Oman National Engineering & Investment Co., based in Muscat in the Sultanate of Oman, has taken delivery of 20 new Bobcat E20 compacts – the first mini-excavators to be sold in the country.

The Bobcat E20 two-tonne model is a Zero Housing Swing (ZHS) excavator, which means that it offers enhanced Zero Tail Swing (ZTS) functionality by protecting the front upper structure corners from turn-

ing within the swing circle. The ZHS configuration in the E20 excavator provides 320° of free rotation when working close to structures, without sacrificing operator comfort or performance.

The unique hydraulic system on the E20 model offers fast cycle times, whereas the boom and arm cylinder cushioning increase overall smoothness. Enhanced stability and lifting capaci-

ty, combined with excellent proportional auxiliary flow, ensure that the E20 model offers the highest versatility in operating a wide range of attachments.

The retractable undercarriage enables the E20 to fit into narrow spaces, while providing optimal stability when extended. Expansion and retraction are simple and easy via a switch on the control panel. The Bobcat E20 model is

constructed from highly durable materials, and all components and design features are tested under extreme conditions to ensure hardwearing and robust performance. The heavy steel gauge tailgate ensures extra durability and peace of mind while working, and can be opened quickly to provide immediate access to conveniently located maintenance and service points, as can the side cover.

**All components and design features of the durable, compact Bobcat E20 mini-excavator are tested under extreme conditions, making it the perfect machine for the harsh climates in the Middle East.**
